

1.

Can't attach featured image for the categories.

Why does it showing "something went wrong" instead of showing the error/notification for actual problem?

2.

Still not able to add customers, brands & categories by CSV

4.

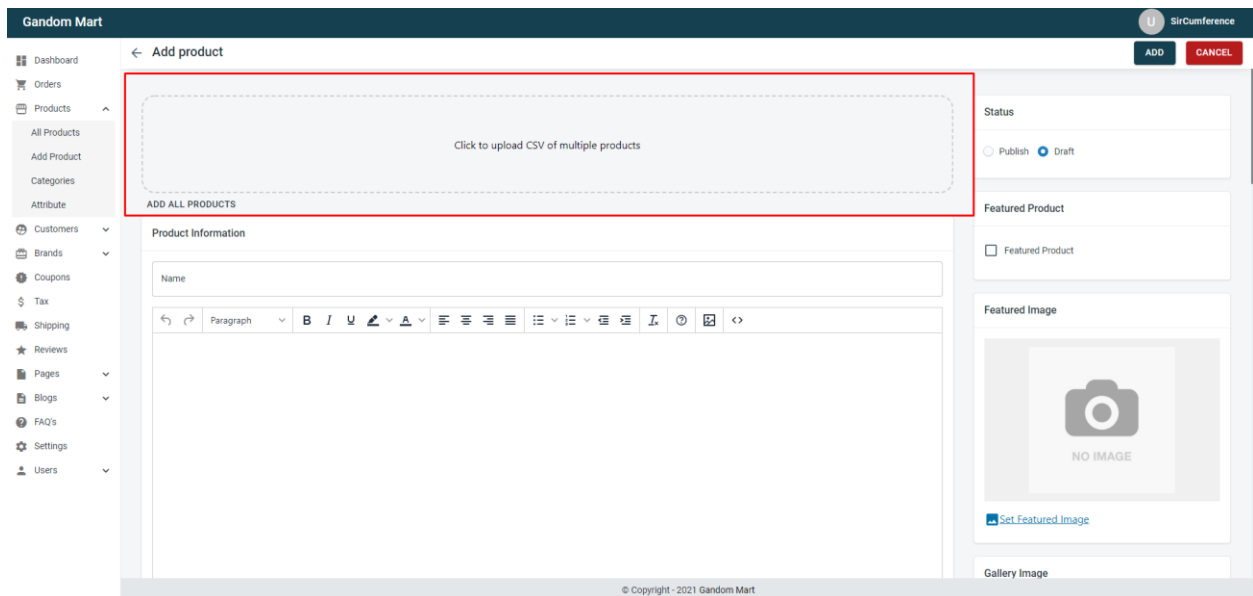

Dashboard 4 options are not working still

Latest Products – view all> button is incorrect.

It seems like /admin is making issues for all of the links...

5.

Still can't upload via CSV, what are the correct fields?

guide me on how the client will upload products later.

## Frontend

You can use this website as a guide for the front end if you have any questions. I don't need things to be exactly like this. Just a reference what kind of information appears on which pages:

[sadaf.com](http://sadaf.com)

Frontend seems like dummy currently, checkout, login, register, coupon code, account details are not functioning. You can't do anything in the frontend
